IMPORTANT RELEASE NOTES

If you are upgrading a system pre-Cookie release, there is a compulsory database upgrade required regardless of your existing database version. There is a possible data conversion needed depending on your existing DB version installed, the first time that Qualify is launched.

The rules for upgrading are as follows:

- 1. Before performing any upgrade, you must take a backup of your database. The upgrade process changes your database structure, and this cannot be undone should you need to revert to an earlier version.
- 2. You must ensure that all users have logged out of Qualify.
- 3. Check the current database version, you can do this by clicking the file tab in the upper left, then selecting Help & Support
- 4. You must be on at least version 7.8.0 of the database (installation media version VA1 or later), if you are not, you must first upgrade your database to that database level. Contact your Original Software representative to acquire the interim installer.
- 5. Once you are on at least version 7.8.0 of the database, you can use your new installation media to upgrade to 7.17.3
- 6. Following the database upgrade to 7.17.3, the first time Qualify is accessed if on a database version earlier than 7.15.0 (installation media version Aerial 10), you will be prompted to perform a data conversion.
- 7. If you chose not to proceed with the conversion, you will be returned to the Qualify login screen. You will not be able to access Qualify until the conversion has taken place.
- 8. If you do not have adequate permission to perform the conversion, a message will be displayed providing information on how to proceed.
- 9. Please note that the amount of time required for the conversion is dependent on the amount of Qualify data, a progress bar indicates how many steps out of the total of steps have been performed.

Please refer to the Qualify Installation Guide for full details on upgrading and running the data conversion. Also, ensure that you read this document in detail before proceeding.

TestDrive
Keyed Child variable in TestDrive11
Performance Opening a Playlist11
Checking Rules – When reporting on a new item, allow the 'Ignore Check' to be completed on each property11
CONTACT DETAILS

Cookie 7

Cookie 7 is an incremental release incorporating functionality and software fixes from the previous Cookie minor releases.

Cookie 7 is a fully tested GA release verified for production use.

In Cookie 7 we have made improvements to our Resource Management functionality, We have improved performance with the TestDrive editor and added the much-requested keyed child Variable data.

Cookie 7 also introduces Original Software's exciting new look.

Qualify

Updating Qualify to the new Original Software Branding.

We are excited to introduce our new branding, you will notice a change in the Qualify shortcuts. The 'Thinking Man' has gone and replaced with our new logo.

Resource Management - allows the 'Actual Time' property to be held on the Entity instead of logging time via an NTLE.

In the versions before Cookie 7, recording time completed on the task needed to be recorded in an NTLE time entity. This was held on the task as a separate tab and allowed multiple entries to be made.

• 📕 🏚	Edit Task: Task 3	- • ×
🗮 Workflow 🏼 🏭 Detail 🚟 Information 🖉 Resour	ce Allocation	ent 통 Comment
Completed by:	Time Recorded	Work Completed on
2, Tester	2h	26/04/2023 18:22:29
2, Tester	2h	27/04/2023 18:22:42
3, Tester	4h	01/05/2023 18:22:58

This change gives you the option to use the traditional method or to use a single integer/time property on the main record. This will be beneficial if the task is completed with one single instance of effort.

Resource Management – show and prevent task allocation when a resource has a holiday booked.

If a resource has a holiday recorded against the resource record

Resource Management – Multiple Resources added to testing (Crowd or exploratory) are now available in the resource management view.

§ 🛒 🗈 🖻	Edit Crowd Test: Create Work Areas
The Workflow Z Details Resources	📎 Attachment
Resource	Resource Statu
Developer, Joe	Ready
Manager, Business	In-Test
User 1, Business	🚽 Ready

First add the resources needed for the given test.

As the status changes they will now appear against the specific user in the resource management area.

	01 May 2023	05 May 2023	1h
	01 May 2023	11 May 2023	30m
Crowd Test	01 May 2023	12 May 2023	2h
Amend Existing Entity	02 May 2023	12 May 2023	45m
			11 %

New To Do list that can show multiple types of work with the same columns set up from different sources.

First define the type of fields needed to be shown in the to do list.

To Do Configuration:	Seq	Caption	Data Type	Agile Card
(Advanced)	1	Status	Pick List	
	2	Name	Text	Image: A state of the state
	3	Priority	Pick List	V 1
	4	Туре	Pick List	Image: Second
	5	Target Date	Date To	Image: A state of the state
	6	Item	Entity Name	✓ 1
	7	Cyde	Entity Select	✓ }
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~		Charles and the second second	~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~	m

Then load each entities properties in to the newly defined To Do list.

	To Do List Properties ✓ Advanced Mode Entity Driven	and a second
	Column	Property
	Status	Status
	Name	U-Task
	Priority	Priority
	Туре	Task Type
	Target Date	Duration
	Cyde	Cyde
Ч	have been and the second secon	

#### When creating an Entity single value select, you can now filter by <Not Blank>

When creating an Entity Single Value Select property, previously you were only able to filter by <Blank> or a particular value. The change in Cookie 7 allows you to also filter by <Not Blank>.

😍 Add a Property			o Okonon i Adama i	×
Type: Name: Alignment: Required Inc in Comments Inc in Comments	Entity Single Value Select Entity Single Value Select Default • Use as Caption Use for Planning Use for De-duplicabi	Card Caption Card Colour on Import Can Exter		Assignment Blocked
Details Help Text Property Name	Constants Filter Map	Values Values <blank> <not bla<="" td=""><td>aks</td><td>v</td></not></blank>	aks	v

When Producing Animation from results, you can now manually replot the inputs.

Previously when creating Animation from a result set that was recorded against an application with no accessibility, the input in the video would have shown the incorrect input location. The change in Cookie 7 allows this to be manually changed by manually plotting the location.

View Edit	
Ø Mou:	se Click
Description:	
Action:	Left Click $\checkmark$
Target:	Text Editor Text
Rectangle	X: 1 Y: 51 Width: 1407 Height: 526 Plot
Offset	X: 619 Y: 447

Adding a layout or view to favourites is now easier with the right mouse click.

To add a layout or view to the favourite section on the left-hand menu, you previously had to drag and drop the object in the favourite location. From Cookie 7, you are now able to right-mouse-click on the layout or view and select 'Add to favourite'.

# TestAssist

Display the Executed Entity's caption within TestAssist

With Cookie 7 we have added the caption from the executed test used to launch TestAssist, this was to help the tester should they need to go back to the test for information.

### TestDrive

#### Keyed Child variable in TestDrive

In TestDrive you can have a Variable data set that has a child Variable Data set, previously for every row of the parent Variable Data set, every row of the child Variable Data set would process.

Using 'IF' logic we would have to test every child Variable Data row and ignore those not matched. From Cookie 7 we can mark a Variable Data Property as 'Use To Match Rows'. This will then match with the child Variable Data set and only process those that match.

೮ Edi	😌 Edit Column Properties				
Column Properties					
	Name:	Customer			
	Data Type:	Text	*		
	Alignment:	General	*		
	Use To Match Rows:				

#### Performance Opening a Playlist

Opening a Playlist could be initially slow, work has been completed to improve the time it takes to open a Playlist.

Checking Rules – When reporting on a new item, allow the 'Ignore Check' to be completed on each property.

Previously when a checking rule reported on a new item on the screen, the only option was to ignore all the checks for that item. From Cookie 7 the user can decide which properties to ignore.
